Responsible committee: B/517/8 Protection and Repair of Concrete

Interested committees: CB/1; B/2; B/11; B/517; B/517/3; B/525/2; B/525/WG1; B/544/6

Draft: prEN 1504-2**Title: Products and Systems for the Protection and Repair of Concrete Structures – Definitions, requirements, quality control and evaluation of conformity –****Part 2: Surface Protection Systems**

**WARNING: THIS IS A DRAFT AND MUST NOT BE REGARDED OR USED AS A BRITISH STANDARD.
THIS DRAFT IS NOT CURRENT BEYOND ITS EXPIRY DATE FOR COMMENTS.**

This draft is issued to allow comments from interested parties; all comments will be given consideration prior to publication. See overleaf for information on commenting.

No copying is allowed, in any form, without prior written permission from BSI except as permitted under the Copyright, Designs and Patent Act 1988 or for circulation within a nominating organization for briefing purposes. Electronic circulation is limited to dissemination by e-mail within such an organization by committee members.

Further copies of this draft may be purchased from BSI Customer Services, at the Head Office address above, telephone 020 8996 9001, fax 020 8996 7001, e-mail orders@bsi.org.uk.

NOTE British, international and foreign standards are also available from Customer Services.

Information on the co-operating organizations represented on the committees referenced above may be obtained from the responsible committee secretary.

Cross-references

The British Standards which implement international or European publications referred to in this draft may be found by referring to the British Standards Online Service on the BSI website under the 'International Relationship' information. This information is also available within the BSI catalogue (paper version) and the BSI Standards Electronic Catalogue (CD).

The Online Service can also be used to find information on draft standards related to international or European publications.

Commenting on drafts

Introduction

This draft standard is based on European discussions in which the UK took an active part. Your comments on this draft are welcome and will assist in the preparation of the consequent British Standard. If no comments are received to the contrary, then the UK will approve this draft and implement it as a British Standard. Comment is particularly welcome on national legislative or similar deviations that may be necessary.

Even if this draft standard is not approved by the UK, if it receives the necessary support in Europe, the UK will be obliged to publish the official English Language text unchanged as a British Standard and to withdraw any conflicting standard.

UK vote

Please indicate whether you consider the UK should submit a negative (with reasons) or positive vote on this draft.

Format

The guidance given below is intended to ensure that all comments receive efficient and appropriate attention by the responsible BSI committee. **Annotated drafts are not acceptable and will be rejected.**

Each comment shall make one point only, be clearly separated from the others and be structured as follows in clause order:

- clause/sub-clause;
- paragraph/table/figure number;
- type of comment (general, technical or editorial);
- comment (with rationale);
- proposed change.

Submission

All comments should be submitted to the committee secretary at the Head Office address, preferably electronically via e-mail or on diskette (MS-DOS compatible, 1.44 megabytes). Comments should be compatible with Version 6.0 or Version 97 of Microsoft® Word for Windows™, if possible; otherwise comments in ASCII text format are acceptable. Any comments not submitted electronically should still adhere to the format requirements given above. No acknowledgement will normally be sent.

Microsoft and MS-DOS are registered trademarks, and Windows is a trademark of Microsoft Corporation.

Table for submission of comments

Please use the attached table for submission of comments.

A blank electronic version of this table can be downloaded from the BSI web site at
<http://www.bsi.org.uk/bsi/products/standards/development/public-comment.xhtml> or it is available from the committee secretary.

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 104.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

Foreword

This European Standard has been prepared by Technical Committee CEN/TC 104 „Concrete - Performance, production, placing and compliance“, the Secretariat of which is held by DIN.

It has been elaborated by sub-committee 8 „Products and systems for the protection and repair of concrete structures“ (Secretariat AFNOR).

The text of the draft standard is to be submitted to enquiry.

This standard does not supersede any other European standard.

This European standard has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association and supports essential requirements of EU Construction Products Directive (89/106/EC). For relationship with EU Directive, see informative annex ZA, which is an integral part of this standard.

This European Standard is one of a series of standards on products and systems for the repair and protection of concrete structures as listed below:

EN 1504-1

Products and systems for the protection and repair of concrete structures - Definitions, requirements, quality control and evaluation of conformity - Part 1: definitions

prEN 1504-3¹⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 3: Structural and non-structural repair

prEN 1504-4¹⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 4: Structural bonding

prEN 1504-5¹⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 5: Concrete injection

prEN 1504-6¹⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 6: Grouting to anchor reinforcement or to fill external voids

prEN 1504-7¹⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 7: Reinforcement corrosion protection

prEN 1504-8¹⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 8: Quality control and evaluation of conformity

prEN 1504-10¹⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 10: Site application of products and systems and quality control of the works

ENV 1504-9²⁾

Products and systems for the protection and repair of concrete structures - Definitions - Requirements - Quality control and evaluation of conformity - Part 9: General principles for the use of products and systems

¹⁾ This document is in preparation

²⁾ EN 1504-1 and ENV 1504-9 will have to be modified when adopted as EN according to finalisation of this standard

0010366X

Introduction

This European Standard gives specifications for products and systems for the repair and protection of concrete structures. The test methods to which the specifications refer are the subject of separate standards.

Surface protection systems are used as "methods" for the following "principles" presented in ENV 1504-9²:

- for Principle 1 (IP): Ingress Protection
 - 1.1 hydrophobic impregnation (H)
 - 1.2 impregnation (I)
 - 1.3 coating (C)
- for Principle 2 (MC): Moisture Control
 - 2.1 hydrophobic impregnation (H)
 - 2.2 coating
- for Principle 5 (PR): Physical Resistance / Surface Improvement
 - 5.1 coating (C)
 - 5.2 impregnation (I)
- for Principle 6 (RC): Resistance to Chemicals
 - 6.1 coating (C)
- for Principle 8 (IR): Increasing Resistivity
 - 8.1 Limiting moisture content with:
 - hydrophobic impregnation (H)
 - 8.2 coating (C)

1 Scope

This standard specifies requirements for the identification, performance (including durability aspects) and safety of products and systems to be used for surface protection of concrete, to increase the durability of concrete and reinforced concrete structures, as well as for new concrete as for maintenance and repair work.

The standard therefore also includes special properties by the surface protective measure.

The protective surface measures ("methods") covered in this standard are the following:

- hydrophobic impregnation;
- impregnation;
- coating.

2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. Normative references are cited at the appropriate places in the text and the relevant publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references this European Standard refers to the latest edition of the publication.

3 Definitions

For the purpose of this standard the following methods and definitions apply in addition to the definitions given in EN 1504-1 and in ENV 1504-9:

3.1 Hydrophobic impregnation

Treatment of concrete to produce a water-repellent surface. The pores and capillaries are not filled, but only covered. No film is produced. The visual appearance of the concrete surface remains nearly unaffected.

Note: Active compounds can be, e. g. Silan, Siloxan.

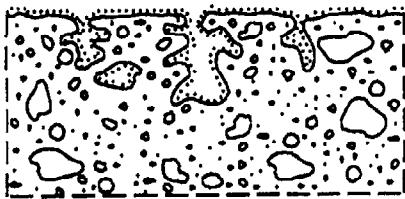

Figure 1: Example of typical hydrophobic impregnation

3.2 Impregnation

Treatment of concrete to reduce the surface porosity. The pores and capillaries are partially filled. Usually, this treatment results in a discontinuous, thin film of 10 µm to 100 µm thickness, on the concrete surface.

Note: Binders can be, e. g. organic polymers.

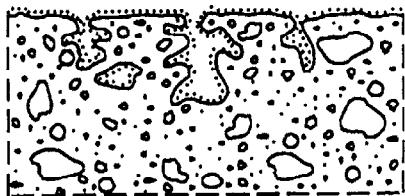

Figure 2: Example of typical impregnation

3.3 Coating

Treatment to produce a continuous protective layer on the surface of concrete. Thickness is typically of 0,1 mm to 5,0 mm.

Note: Binders can be, e. g. organic polymers, organic polymers with cement as a filler.

Figure 3: Example of typical coating

4 Performance characteristics for intended uses

4.1 General

Table 1 is an overview of performance characteristics of products and systems which are possible for „all and certain intended uses“ according to the „principles“ and „methods“ defined in ENV 1504-9. Performance characteristics which are compulsory for „all intended uses“ are marked with ■. All other performance characteristics which are marked with □ may become necessary for „certain intended uses“ = certain fields of application.

Tables 3.1, 3.2 and 3.3 are listings of all performance characteristics and requirements for each method.

The preparation of the test samples shall be carried out horizontal or vertical depending of the application in use.

According to the definitions and the summary in table 1 there are only three „methods“ for the different „principles“ for which „Surface Protection Systems (SPS)“ are necessary.

4.2 How to choose appropriate product or system

1. „Assessment“ of defects, their classification and causes (diagnosis).
2. On base of the assessment the „principle(s)“ for protection and repair of the concrete structure has(have) to be chosen.
3. When the „principle(s)“ is(are) defined the appropriate „method“ (Hydrophobic impregnation, impregnation and coating) to fulfill one or several principle(s) has to be chosen. The corresponding squares ■ represent basic compulsory characteristics (see table 1).
4. Based on the diagnosis further characteristics for the products and systems to be used have to be established, if they are justified for the certain intended use.
5. The „requirements for the set of characteristics of the products and systems for the intended use are given in the corresponding table (see table 3.1, 3.2 and 3.3).

Note: Details are given in EN 1504-9.

5.2 Performance requirements

The performance characteristics are summarized in table 3.1, 3.2 and 3.3.

All symbols used in these tables under the headline „Requirements“ are described in the test methods.

Flooring systems in buildings which are not intended to protect or reinstate the integrity of a concrete structure are standardised in prEN 00303018 (CEN/TC 303). If products and systems according to prEN 1504-2 are also used for flooring applications with substantial mechanical loading, the requirements according to prEN 00303018 (CEN/TC 303) shall also be fulfilled.

6 Sampling

This issue is defined in prEN 1504-8.

7 Quality control

This issue is defined in prEN 1504-8.

8 Marking and labelling

This issue is defined in prEN 1504-8.

Table 3.1 Performance Requirements for Hydrophobic Impregnation

No. acc. table A.1, part 9	Test method prEN	Performance Characteristics	Requirements
82		Depth of penetration	The depth of penetration is defined with an exactness of 0,1 mm by breaking of the treated specimen and spraying the fracture surface with water.
97	prEN 13580	Water absorption and resistance to alkali	Absorption ratio < 7,5 %. Absorption ratio (after immersion in alkali solution) < 10 %.
98	prEN 13579	Drying test for hydrophobic potefining impregnation	Drying rate > 30 %.
31	test method till yet not determined	Diffusion of chloride ions	No value can be defined yet
71	prEN 13581	Determination of loss of mass after freeze-thaw-salt stress	The erosion of the surface of the impregnated specimen must occur at least 20 cycles later than that of the not impregnated specimen. This test is only necessary for structures which may come in contact with deicing salts (e. g. bridges or tunnels) and is then compulsory.

93	National regulations	Physiological performance	Acc. to the national requirements

Table 3.4 Test conditions (method A) for crack bridging test acc. to prEN 1062-7

Class	Width of the crack bridged µm	Speed mm/min
A 1	> 100	-
A 2	> 250	0,05
A 3	> 500	0,05
A 4	> 1250	0,5
A 5	> 2500	0,5

NOTE: The test temperatures can be agreed between the interested parties.
 As test temperature for the classes A2 - A5 -10 °C is recommended (A1: 21 °C).
 Other test temperatures can be 10 °C, 0 °C, -10 °C, -20 °C, -30 °C, -40 °C.
 The test temperature shall be included in brackets after the class (e. g. A4 (-20°C)).

ad/02366DC

Table 3.5: Test conditions (method B) for crack-bridging test acc. to prEN 1062-7

Class	Test conditions (see figures B.1 and B.2)
B 0	$w_o = 0,15 \text{ mm}$ $w_u = 0,10 \text{ mm trapezoid}$ $RW = 100$ $f = 0,03 \text{ Hz}$ $w = 0,05 \text{ mm}$
B 1	$w_o = 0,15 \text{ mm}$ $w_u = 0,10 \text{ mm trapezoid}$ $RW = 1000$ $f = 0,03 \text{ Hz}$ $w = 0,05 \text{ mm}$
B 2.1	$w_o = 0,30 \text{ mm}$ $w_u = 0,10 \text{ mm trapezoid}$ $RW = 1000$ $f = 0,03 \text{ Hz}$ $w = 0,20 \text{ mm}$
B 2.2	as in B 2.1, and $w_l = \pm 0,05 \text{ sinus}$ $RW = 20\,000$ $f = 1 \text{ Hz}$
B 3.1	$w_o = 0,50 \text{ mm}$ $w_u = 0,20 \text{ mm trapezoid}$ $RW = 1000$ $f = 0,03 \text{ Hz}$ $w = 0,30 \text{ mm}$
B 3.2	as in B 3.1, and $w_l = \pm 0,05 \text{ sinus}$ $RW = 20\,000$ $f = 1 \text{ Hz}$

Explanation of symbols:

 f = frequency w_l = load-dependent crack movement RW = number of crack cycles w_o = maximum crack width w = Change in crack width w_u = minimum crack width

NOTE:

The test temperatures can be agreed between the interested parties.

As test temperature -10°C is recommended. Other test temperatures can be 10°C , 0°C , -20°C , -30°C , -40°C .The test temperature shall be included in brackets after the class (e. g. B3 (-20°C)).

Annex ZA (informative) Harmonized clauses, attestation of conformity and CE marking**Z.A.1 Clauses of this European Standard addressing the provisions of EU Construction Products Directive**

This European Standard has been prepared under a Mandate given to CEN by the European Commission and the European Free Trade Association.

The clauses of this European Standard, shown in the table below, meet the requirements of the Mandate given under the EU Construction Products Directive (89/106).

Compliance with these clauses confers a presumption of fitness of the construction product covered by this European Standard for its intended use(s).

WARNING : Other requirements and other EU Directives, not affecting the fitness of intended use(s), can be applicable to the construction product falling within the scope of this European Standard.

Construction product : Surface protection products

Intended uses : used in protection against ingress, moisture control, physical resistance and resistance to chemicals

Requirement/ Characteristic from the Mandate :	Requirement Clause(s) in this or other European Standard(s) :	Mandated levels and/or classes	Notes :
- Bond / adhesion strength			wr
- Compressive strength			wr
- Shrinkage / expansion			wr
- Sensivity to water (incl. seawater)			wr
- Crack bridging (static and dynamic)			wr
- Diffusion resistance	Paragraph 5.2 Table 3	None	wr
- Water repellence			wr
- Coefficient of thermal expansion			wr
- Reaction to fire			wr
- Water vapour permeability			wr
- Water permeability			wr
- Release of dangerous substances			wr
- Skid resistance			wr

00/03366DC

ZA.2 Procedure for the attestation of conformity of products

Product	Intended use	Level(s) or Class(es)	Attestation of conformity
Surface protection products	For uses with low performance requirements in buildings and in civil engineering works	none	4
	For other uses in buildings and civil engineering works		2 +

System 2+ : See CPD Annex III.2 (ii), First possibility, including certification of the factory production control by an approved body on the basis of initial inspection of factory and of factory production control as well as continuous surveillance assessment and approval of factory production control

System 4 : See CPD Annex III 2 (ii), Third possibility

The evaluation of conformity of the surface protection products covered by this European Standard shall be assessed following clause 7.

ZA.3 CE marking and labelling

CE marking shall be fixed following clause 8 which gives guidance on the characteristics that have to be stated within the labelling that will accompany the CE marking in compliance with the intended use of the product and on the way of expressing the values on these characteristics where required.

Accompanying the CE marking, the manufacturer shall mention the following information on the commercial documents accompanying the product :

- Name, or identify mark, and the address of the manufacturer
- Last two digits of the year in which the marking was fixed
- EN 1504-2 – Surface protection products
- For the system 2+ : number of the CE certificate of conformity delivered by the certification body and its identification number
- For the system 2+ : identification number of the body involved in FPC
- Bond/strength : where relevant
- Compressive strength : where relevant
- Shrinkage/expansion : where relevant
- Sensitivity to water : where relevant
- Crack bridging : where relevant
- Diffusion resistance : where relevant
- Water repellence : where relevant
- Coefficient of thermal expansion : where relevant
- Reaction to fire : where relevant
- Water vapour permeability : where relevant
- Water permeability
- Release of dangerous substance : where relevant
- Skid resistance : where relevant

NOTE For those characteristics that are not declared by the manufacturer for given intended uses and for which there are no requirements in a Member State of destination, the corresponding boxes do not need to be completed
